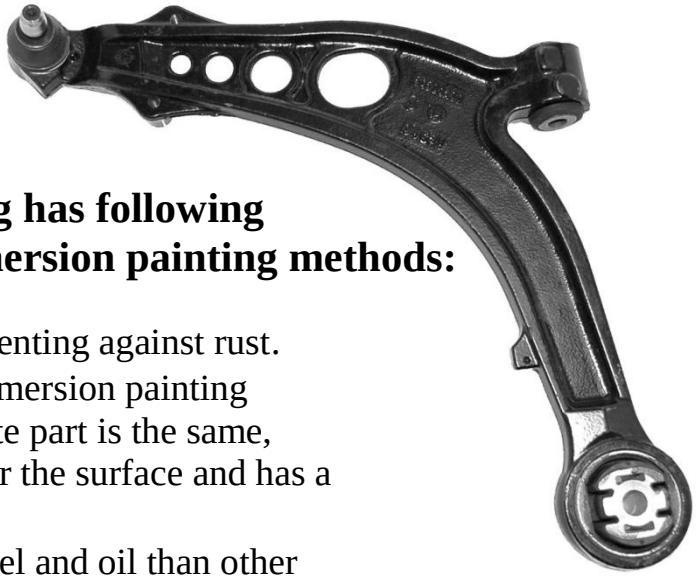
Sidem forged and casted arms coated with Epoxy Ester immersion painting.



Epoxy Ester immersion painting has following advantages over the classic immersion painting methods:

- Better coating adhesion that is preventing against rust.
- Special engineered rheology for immersion painting
  => layer thickness over the complete part is the same,
  => the part is equally protected over the surface and has a uniform surface appearance.
- Has a higher resistance against diesel and oil than other classic immersion paint.
- Uses a special modified pigment that is faster active in aggressive environments than the classic used pigments.

Conclusion:

- Sidem forged and casted TCA's are good protected against rust.
- And have a nice uniform appearance.
