

PRODUCT
OPTIMIZATION

THE RIGHT SOLUTION FOR STEERING AND SUSPENSION PARTS

MAKING SMART PARTS

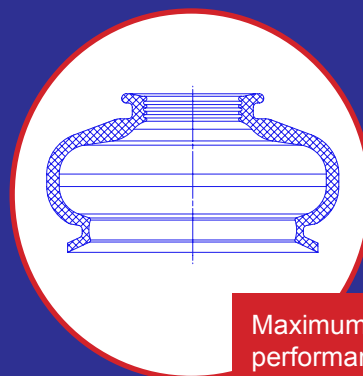

The range of **Sidem stabiliser links** has been equipped with a **new type of dustcover**. This dustcover prevents that the interior part of the ball joint is polluted by dust or moist leading to corrosion and damaging of the part. The upper part of the new dustcover on stabiliser links fits perfectly into the groove of the ball joint thanks to the smart design on the level of shape and materials, making Sidem your **OE equivalent**.

CREATING SAFE SITUATIONS

The new dustcovers are fabricated in **high quality chloroprene rubber** ensuring maximum resistance to chemical substances. The elasticity is also maintained when exposed to extreme temperatures. The **shape of the dustcover** is designed in such a way that it will not twist during installation. On the inside the dustcover is designed with grooves ensuring an excellent barrier for water infiltration. Finally, the exact thickness and diameter of polyurethane top ring on the dustcover will guarantee **maximum sealing**.

Maximum sealing
performance

TRUST THE SPECIALIST

Sidem stabiliser links have all been equipped with this new type of dustcover guaranteeing you an **easy installation and long life span** of the part. In the table below you will find all the references of the dustcovers which are **available separately** in kits.
